

FreeDatamap provides a unique way to browse any kind of data

FreeDatamap helps turning flat and boring sheets of data into a unique visual compelling dashboard

At the crossroads of **mind-mapping** and **business-intelligence**: **FreeDatamap** delivers a fast and visually attractive user interface that runs on any support: computers, tablets or phones.

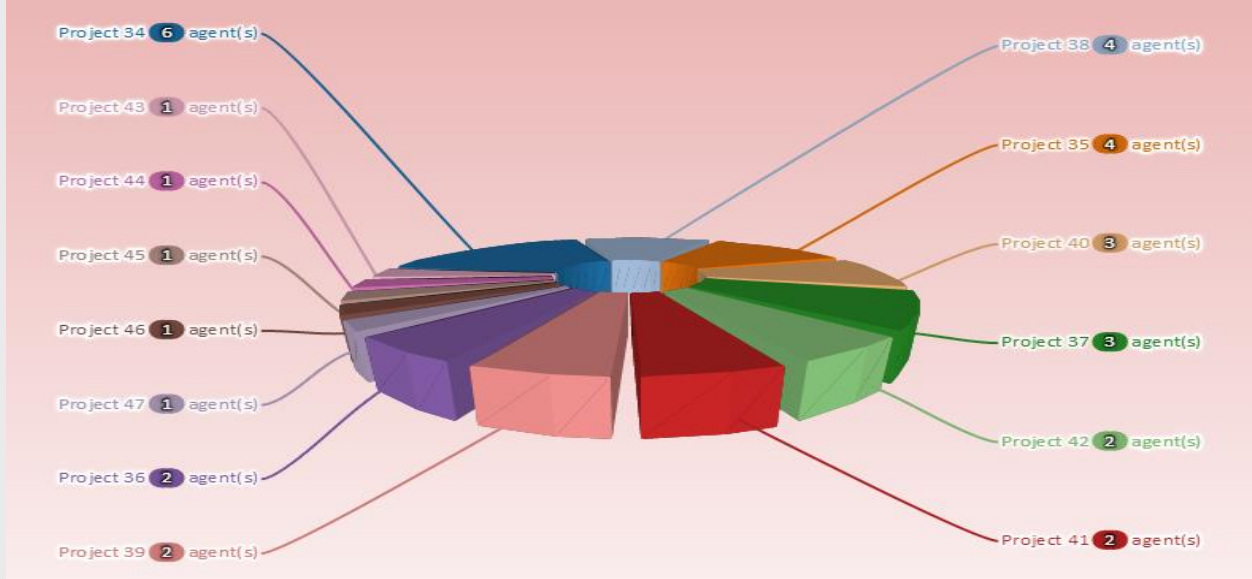

FreeDatamap gives awareness and control on all the data you need for your day to day business. From a unique root node, you can browse and aggregate thousands of information and bring this complex topology of data into the hands of people in a simplified way that enables them to take the best decision within minutes instead of days without.

- Find your way in an overwhelming amount of information.
- Visualize your data in a centralized trusted map.
- Display your business process across your organization.
- Navigate into the map and drill down to find the root cause of an indicator.
- Find any atomic data thanks to a powerful and immediate search engine.
- Reduce time to make fact based decisions.

Unchain your data !

The combination of both graphic map and classic charts, leads to a complete and interactive dashboard for rapid information access.

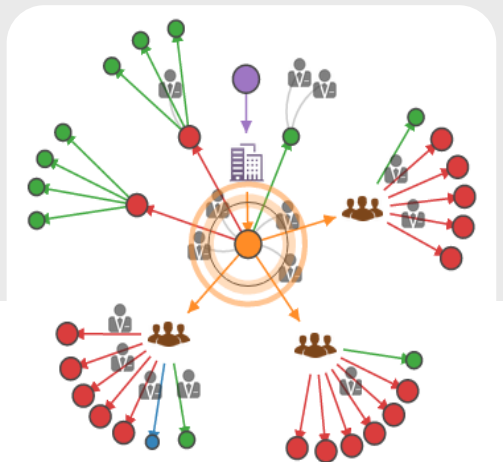

It's all about data

In the majority of companies, information is not shared consistently across the organization, nor is data readily available to those who need it. Take advantage of the **most highly configurable analytical capabilities** to regain control on the information flow and to bring data together in one unique place.

Thanks to **FreeDatamap**, all kinds of data can be considered holistically.

FreeDatamap imagines a new way to browse and analyze KPIs

Mapping any kind of data into a tree is the most user-friendly way to understand problems. Mapping operational data, like human resources, financial indicators or supply chain counters, into one organization's hierarchy, helps presenting data in the way decision makers think their organization.

Designed to rapidly aggregate data in a multi-dimensional way, **FreeDatamap** helps you manage efficiently your organization's data stream.

FreeDatamap : the right tool for data-driven decision making.

With freeDatamap, access the right data, share the knowledge, break silos, help data to go "social", make data available and collectively enriched.
